Wes McGregor : Facilities Management and the Business of Space before purchasing it in order to gauge whether or not it would be worth my time, and all praised Facilities Management and the Business of Space:

1 of 1 people found the following review helpful. One of the best books about the theme
By Prof. Dr. Moacyr E. A. da Gracedil;aThe book is very good. The authors present the discussion with precision and detail. It is a best seller. The first choice for corporate real estate / facilities managers.
5 of 7 people found the following review helpful. Facilities Management and the Business of Space
By Tracy LampingDon't be misled by the apparently narrow title of this book - it is actually a very comprehensive text which addresses many pertinent areas to Facilities Management. The material is excellent and up to date, offering useful case studies. I shall be adopting this excellent book for my intermediate level and final level undergraduates.

Essential reading for building owners, facilities managers, architects and surveyors, this book will also prove useful on

business management and facilities management courses, and for those studying architecture, surveying and real estate management.

"well-referenced ... provides a good introduction ... written in a highly accessible and pragmatic manner ... the authors stimulate off-the-page thinking ... " Dr J. Hinks in Facilities" If you need to brush up on your space planning and management skills, Wes McGregor and Danny Then have written the book for you ... a detailed look at the processes involved in space planning" WorkplaceAbout the AuthorWes McGregor , Director, McGregor Consultancy Services and the AWA, UK Danny Then , Associate Professor in Strategic Asset Management and Facilities Management at Queensland University of Technology, AustraliaExcerpt. copy; Reprinted by permission. All rights reserved.From the Preface-- This book, borne out of the authors' experiences in research and practice, is intended to assist those for whom the planning of an organization's workspace is a key component of their job. It looks at the changing nature of work and the implications of the workplace - in short the demand and supply sides of the workspace equation. We trace the growing trends of organizations that are integrating their physical resource considerations (built assets) into their overall business planning processes. We describe methods that can be employed to gain an understanding of the needs of the business (current and future) and the capabilities of current workspace, and how to reconcile the supply and demand equation. We aim to show the correlation between work and the workplace, between workplace provision and the effectiveness of people, and the correlation between the way the workplace is provided and serviced, and business's effectiveness in meeting the needs of their customers. Finally, we also encourage "stepping back from the canvas" - that is to say putting the details of your organization's forecast workspace needs into the context of the changing world of work - and in so doing create an opportunity to add real value to the organization by moving from _responsive_ to _anticipatory_ workspace planning. In each chapter we use Case Notes, drawn from businesses we have encountered through our research and consultancy work, to illustrate the topics covered which we hope will exemplify and amplify the text. This book covers many topics relating to buildings, technology, environmental services and their management. But essentially this book is about people. That is the people who design, construct, service, maintain, lease, buy and sell workspace - but most importantly of all, it is about the people who use workspace. It is about their needs and aspirations, their likes and dislikes, and how to create workplace environments that best support them in their endeavors.
