Gerard Colson : Models and Methods in Multiple Criteria Decision Making (International Series in Modern Applied Mathematics and Computer Science) before purchasing it in order to gage whether or not it would be worth my time, and all praised Models and Methods in Multiple Criteria Decision Making (International Series in

Modern Applied Mathematics and Computer Science):

This volume is devoted to models and methods in multiple objectives decision making. The importance of the multiple dimensions of decision making was first recognised during the 1960s and since then progress has been made in that theoretical or application oriented contributions may now be categorized under two main headings:- Multiattribute Decision Making (MADM) which concerns the sorting, the ranking or the evaluation of objects of choice according to several criteria and Multiobjective Decision Making (MODM) which deals with the vector optimization in mathematical programming. The above are also presented in the context of various applications, namely banking, environment, health, manpower, media, portfolio and traffic control, resulting in a book for a wide variety of readers.
